

Optical Data Centre Interconnect

It's a very exciting time for Optical networks being positioned at the forefront of the data explosion created by 5G, Internet of Things (IoT) and the Gigabit connected cities. Next Generation Optical Networking 2017 addresses and mirrors this optical innovation and drive towards Terabit transmission with a smarter and more flexible exhibition and conference. The conference includes all the key areas of growth for the optical networking industry, covering these 4 key optical market areas: Optical Data Centre Interconnect; Transport SDN; Photonic Integration; Optical as Enabler for Gigabit Cities & IoT.
