

PRESS RELEASE

The 3rd SD-WAN Summit will be held 26/28 September 2018 in Paris CDG.

The Summit will confirm its position as the leading event for stakeholders in this new technology.

Interoperability, Security, Scalability

It will be interesting to see next September how much SD-WAN is reshaping the overall telecom industry and whether or not it is impacting the globalization of business services and service providers' footprints.

Indeed, before reaching this level, the SD-WAN offer must acquire a wider scope of features in terms of security and scalability. Above all, the different offers have to become interoperable in order to definitively win over operators and very large enterprises.

The 3rd SD-WAN Summit will be an occasion to see just to what extent the different SD-WAN stakeholders have become aware of these imperatives.

The 2018 agenda

The Summit agenda will address the following main sessions:

- The move from dedicated managed networks to an aggregation of dumb pipes with SD-WAN orchestration
- SD-WAN for complex cloud-enabled Hybrid WANs
- SD-WAN SLA, can OTT offer it?
- Performance & scaling challenges of SD-WAN
- uCPE and SD-WAN service orchestration
- Vendor vs. service provider deployment case studies
