

## ***SD-WAN Summit 2020: Call for Proposals***

**The 5<sup>th</sup> SD-WAN Summit will take place from 22<sup>nd</sup> to 24<sup>th</sup> September 2020 in downtown Paris**

SD-WAN is going everywhere. SD-WAN will run in the cloud, SD-WAN will run on IoT endpoints, and SD-WAN will encompass corporate end users on their laptops and mobile devices. In other words, SD-WAN supplants VPNs and becomes the dominant form of secure connectivity. SD-WAN goes from replacing MPLS VPNs with encrypted OTT connections to replacing mobile and laptop VPN clients with SD-WAN clients leveraging the same VPN technologies.

The SD-WAN Summit will once again demonstrate how this technology is expanding its scope in new multiple domains.

As each year, the programme will benefit from many operators and enterprises testimonies. They will address their development focal points and the future evolution of their services.

Renowned experts will underline the maturity challenge of SD-WAN and what are the pain points.

***A call for proposals is open until April 15<sup>th</sup>.***

### **The 2020 Agenda : Expansion of SD-WAN's Scope**

The 2020 edition will offer a special focus on SD-WAN's expansion in new multiple domains:

- SASE, security and networking convergence
- Cloud, VMs, containers
- SD-WAN and edge computing
- IoT devices
- Mobile users
- Partner networks

Other main sessions will cover use cases, state of deployment, managed SD-WAN vs DIY, orchestration and open source.
