

SDWAN and SASE 2022 8/9 NOV 7TH EDITION

SD-WAN and SASE Summit 2022

Securing Service Edge

The SD-WAN & SASE Summit agenda is released.

The 7th edition of the Summit will take place next **8th and 9th November 2022** as an **hybrid event** (in-person in Paris and live streaming online) at the Hotel Pullman Paris Centre.

The 2022 programme: a special focus on SSE

SSE, the acronym proposed by Gartner, is given a large echo in the agenda. Analysts, service providers and industrials demonstrate that it is no longer enough to offer a managed SD-WAN solution – to stay ahead, they must ensure they can offer an integrated SASE or SSE solution on a global scale. They review the technologies behind these acronyms, what they are and what they are not, and how they work in harmony to answer the different market segment needs.

Other sessions cover Deployments, uCPE, Orchestration, ZTNA, AI and 5G architecture issues, especially SD-WAN network slicing.

A Debate on the Three Architectural Models of SASE

Panelists discuss diverse architectural models that combine SD-WAN, SSE, and SASE. They highlight, their use cases, and the different views on realizing them.
